One problem.
Multiple ways to solve it.

We start with the business need, then choose the right delivery model instead of forcing every client into custom development.

THREE WAYS TO WORK

01 **Custom development**

A unique system built for your processes, integrations and operating model.

02 **Ready-to-use products**

Choose an existing product with subscription or licensing, plus optional setup and adaptation.

03 **Product partnership**

A recurring problem becomes a shared product built and evolved with its first clients.

FROM PROBLEM TO PRODUCT

Describe the need
what should work better

Validate the fit
custom or reusable

Choose the model
scope, ownership, pricing

Launch
build, integrate, onboard

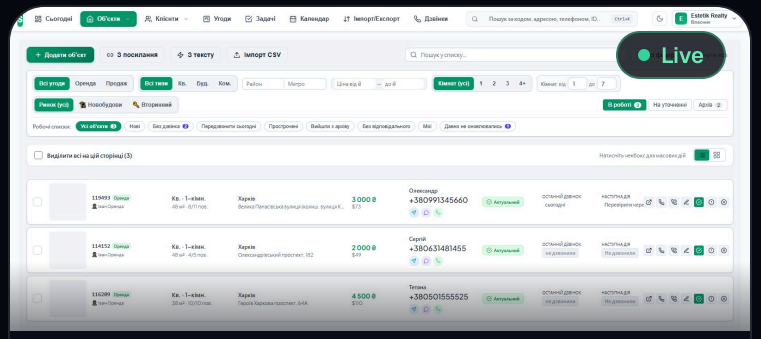

Evolve
feedback improves the product

A CLEAR COMMERCIAL BOUNDARY

CUSTOM PROJECT	PRODUCT SUBSCRIPTION
✕ One client with unique requirements	✓ Many clients with shared functionality
✕ Paid development and implementation	✓ A recurring access fee
✕ Client-specific features stay separate	✓ Shared features make the product stronger

Real products built for real operations.

Each one started from a practical business problem. The same experience goes into every custom project.

Rieltix

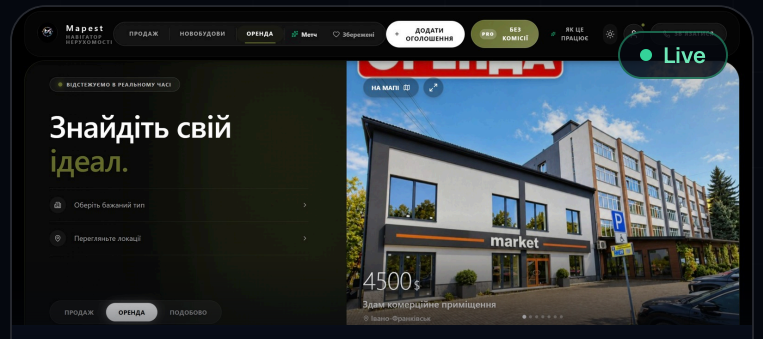

Open product ↗

CRM for real estate agencies

- ✓ Property and client database
- ✓ Team tasks and calendar
- ✓ Agency website with catalog and map
- ✓ Telegram integration, workflow automation

WHAT IT DELIVERS

Agents see the next step for every client — nothing gets lost between chats and spreadsheets.

Mapest

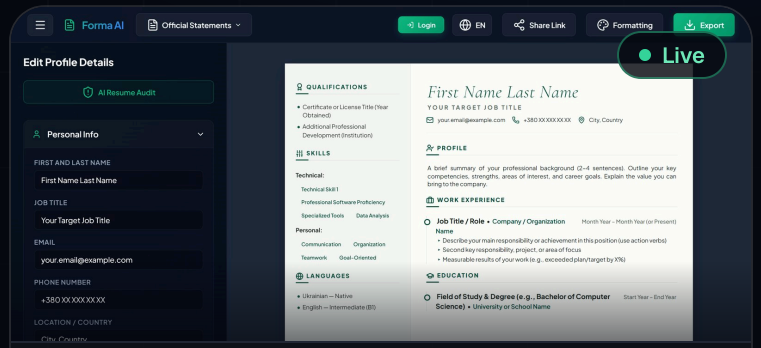

Open product ↗

Property search & listings platform

- ✓ Listing aggregation and de-duplication
- ✓ Interactive map with area selection
- ✓ Structured catalog with detailed filters
- ✓ Automatic data updates, Telegram alerts

WHAT IT DELIVERS

Large volumes of scattered data are collected, organized and kept up to date automatically.

Forma

Open product ↗

Smart document builder with AI

- ✓ Templates for letters, agreements, statements
- ✓ Live editor with instant preview
- ✓ AI help to improve and translate text
- ✓ Digital signature, export to PDF and Word

WHAT IT DELIVERS

Less time on routine paperwork — and documents that look consistent every time.

Software built around your operation

When ready-made tools do not fit, we design the system, integrations and automation around your actual process.

CRM & Business Management

All clients, deals and tasks in one place. You can see what is happening in your business at any moment.

FOR EXAMPLE Sales pipeline, team tasks, owner dashboard

AI Assistants & Chatbots

Answer common questions 24/7, collect client details and pass ready requests to your team.

FOR EXAMPLE WhatsApp / Telegram bots, website chat.
Voice AI assistant — in development

Business Process Automation

Repetitive tasks run on their own: reminders, notifications, reports and data transfer.

FOR EXAMPLE Automatic follow-ups, daily reports, document generation

Websites & Web Applications

A fast, modern website that sends client requests straight into your system.

FOR EXAMPLE Company website, product catalog, client portal

Custom Software Development

Software built for your exact process when ready-made tools don't fit.

FOR EXAMPLE Internal systems, booking, inventory, price calculators

API & System Integrations

Your tools talk to each other — no more copying data by hand between apps.

FOR EXAMPLE CRM + messengers + payments + spreadsheets

Start with a client problem. Build a product others need.

When the same need appears across companies, we validate a shared product and evolve it with early users.

THREE STAGES

STAGE 1 Validate
Test recurring demand and the economics

STAGE 2 Launch
Define ownership, pricing and scope

STAGE 3 Scale
Feedback drives the shared product

Recurring problem

We look for a need shared by several companies, not a one-off request.

Commercial validation

Demand, willingness to pay and support costs are tested before scaling.

Clear ownership

Code, data and product rights are defined before development starts.

Defined subscription

The service scope and pricing are attached to the shared product.

Shared roadmap

Common features evolve for all users; unique needs remain extensions.

Continuous evolution

Client feedback becomes a structured input into product development.

How we work

1 **Discuss the task**
A short conversation about your business and goals.

2 **Analyze needs**
We map the process and decide what to automate first.

3 **Solution & cost**
A clear proposal: scope, timeline and price.

4 **Build & test**
Regular demos, so you always see the progress.

5 **Launch & grow**
Go live, onboard the team, keep improving.

TWO WAYS TO START

Custom project
A defined build for your own operation.

Product partnership
Start with a shared problem and explore a reusable product.

Have a business problem others may share? Let's explore whether it should become a product.

Tell us about the process, who feels the pain and what success should look like.
